AGRINET

Nigeria's cold chain, connected.

One network for farmers, cooperatives, cold storage, veterinary care and buyers — built to stop food from rotting before it's sold.

Founder & CEO · Divine Oworoma

Nigeria grows enough food. It just doesn't survive the journey.

50%

of fresh produce harvested in Nigeria is lost before it reaches a buyer

USAID

₦3.5–5tn

in food lost annually — more than 3x the federal 5-year agric budget

BusinessDay / OTACCWA

4%

of the cold storage capacity Nigeria actually needs is currently in place

Industry estimates, 2026

16.9%

annual food inflation — shortages and spoilage drive prices up for everyone

NBS, Sept 2025

Farmers lose income. Cooperatives can't guarantee supply. Buyers pay more for less. Everyone in the chain absorbs the cost of the same broken link: nowhere reliable to store, move, or verify food between the farm and the market.

A FRAGMENTED VALUE CHAIN

Every player works alone — so the weakest link decides the outcome

Farmers harvest with no guaranteed buyer and no nearby storage, so produce is sold fast and cheap — or left to spoil.

Cold rooms sit underused or are unknown to the farmers and traders who need them most, with no shared booking system.

Veterinary services are scattered and hard to reach, so livestock losses and disease go unmanaged in rural areas.

Cooperatives & buyers can't verify supply or quality in advance, so they over-order, under-order, or pay middlemen premiums to de-risk.

THE SOLUTION

One app that puts the whole chain on the same page

Agrinet is a single network where farmers, cooperatives, cold-room owners, veterinary services and buyers transact, book, and track produce in real time — from field to fridge to market.

Cold storage booking

Farmers & traders reserve verified cold-room space nearby, on demand.

Direct marketplace

Cooperatives and buyers order straight from farmers — no blind middlemen.

Vet access on call

Livestock farmers request nearby veterinary support in a few taps.

Delivery tracking

Every order is tracked from pickup to delivery, cutting spoilage in transit.

HOW IT WORKS

From harvest to sale, without the guesswork

1. List

Farmer or cooperative lists produce or livestock, with quantity & location.

2. Store

Nearest cold room is booked instantly to hold produce fresh.

3. Match

Buyers & cooperatives browse verified supply and place orders.

4. Move

Delivery is tracked door-to-door; vets are on call for livestock.

5. Get paid

Payment settles in-app — Agrinet earns a small commission.

Every step happens inside one app — so trust, pricing and availability are visible to everyone in the chain, not just whoever has the best contacts.

PRODUCT

The MVP: built and in final testing

- **Verified farmer & cooperative profiles**

  Every lister is identity-checked before going live on the network.

- **Live cold-room availability**

  Real-time capacity from partner cold rooms, booked in-app.

- **In-app order & delivery tracking**

  Buyers see status from pickup to drop-off, end to end.

- **On-demand vet requests**

  Livestock farmers reach nearby veterinary support directly.

Status: MVP built — currently in internal QA ahead of pilot launch with our first cold-room and cooperative partners.

OUR DIFFERENTIATOR

We start where the money is lost: cold storage

Most agritech platforms in Nigeria focus on farm credit or a single marketplace. Agrinet leads with cold-chain access — the single biggest, most measurable point of loss — then uses it as the anchor to bring cooperatives, vets and buyers onto one network.

Cold chain first

Booking verified cold storage is the entry point — the pain point every farmer feels immediately.

All-in-one network

Once inside, the same farmer reaches buyers, cooperatives and vets without leaving the app.

Trust by design

Verified listings and tracked delivery replace guesswork and middleman risk.

BUSINESS MODEL

Three ways Agrinet earns from one network

Subscriptions

Cooperatives, cold-room owners and vet partners pay a monthly fee for premium visibility, analytics and priority booking.

Commissions

A small percentage on each marketplace transaction between farmers/cooperatives and buyers.

Delivery fees

A per-order logistics fee for coordinated pickup and tracked delivery between parties.

Why this works: cold storage keeps users coming back weekly (not seasonally), which makes the subscription and commission layers durable rather than one-off.

MARKET OPPORTUNITY

A large, underserved and fast-growing market

₦160bn

cold-chain infrastructure gap in Nigeria today

$45M

Nigeria agritech market in 2025, up from $22M in 2020

15.5%

CAGR — the fastest-growing agritech market in the region

Our funnel

TAM	All Nigerian smallholder farmers, cooperatives & cold-chain operators	**~38M farming households**
SAM	Perishable-goods farmers & cooperatives within reach of a cold room	**~9M households**
SOM	Our 3-year target across 6 pilot states	**150,000 users**

COMPETITIVE LANDSCAPE

Others solve one link. We connect the whole chain.

	Farm credit & off-take	Marketplace matching	Cold-chain hardware	Vet access	All-in-one network
Farm-finance platforms (e.g. Thrive Agric-style)	✓	–	–	–	–
Cold storage & solar providers (e.g. ColdHubs)	–	–	✓	–	–
General B2B produce marketplaces	–	✓	–	–	–

TRACTION & ROADMAP

Where we are, and what the next 12 months look like

Today

MVP built and in internal QA. Core flows live: listings, cold-room booking, marketplace, delivery tracking, vet requests.

Month 1–2

Pilot launch with our first cold-room partner and cooperative in one state; onboard first 500 farmers.

Month 3–6

Expand to 3 states; integrate in-app payments and delivery partners; reach 5,000 active users.

Month 7–12

Scale to 6 states; onboard veterinary partners network-wide; targeting 150,000 users and first subscription revenue at scale.

GO-TO-MARKET

Win the cold room, win the network around it

Partner cold rooms first

Sign 1–2 existing cold-room operators per pilot state so supply is real from day one.

Anchor cooperatives

Onboard farmer cooperatives as trusted local champions who bring their members with them.

Low-data, agent-assisted app

Field agents help first-time users list produce and book storage in areas with weak connectivity.

Buyer-side pull

Recruit urban market buyers and processors who want predictable, traceable supply.

TEAM

Built by a founder close to the problem

Divine Oworoma

Founder & CEO, Agrinet

Solo founder building Agrinet end-to-end — product, partnerships and pilot design — with direct experience of the food-loss problem this platform solves. Open to bringing on a technical co-founder and operations lead as the pilot scales.

HIRING NEXT

- **Technical Co-Founder / CTO**
- **Field Operations Lead**
- **Partnerships Lead (Cold Chain)**

THE ASK

What the ₦2.5M prize unlocks

We're using this competition to fund the leap from a finished MVP to a live pilot with real cold rooms, cooperatives and buyers on the network.

35%

Pilot partnerships

Onboarding fees & incentives for first cold-room and cooperative partners.

25%

Field operations

Agents supporting farmer sign-up and training in pilot communities.

20%

Product & tech

Payments integration, delivery tracking and app hardening for scale.

20%

Marketing & GTM

Local awareness campaigns to drive farmer and buyer sign-ups.

Every year, Nigeria loses more food to spoilage than it spends feeding its farmers.

Agrinet is how we close that gap — one cold room, one cooperative, one delivery at a time.
