AGRINET

One network for Nigeria's food chain — farmers, cold rooms, vets, and buyers, connected.

[Your Name], Founder

Prepared for the National Startup Challenge | ₦2.5M Prize Track

THE PROBLEM

Nigeria grows the food. It just never reaches the plate.

₦3.5tn

Lost to post-harvest waste every year in Nigeria — more than 3x the federal 5-year agric budget

40–60%

Of perishable produce (fruits, vegetables, tubers) spoils before it reaches a consumer

34.7M

Nigerians projected to face severe food insecurity in the 2026 lean season (FAO)

WHY IT HAPPENS

It's not a farming problem. It's a coordination problem.

No cold storage nearby

Produce sits in open trucks and markets with no refrigeration — tomatoes alone lose up to 65% of harvest.

No visibility into buyers

Farmers sell to the first trader who shows up, often below fair price, because there's no direct link to cooperatives or bulk buyers.

No animal health support

Livestock and produce losses from disease go unmanaged — vets are hard to reach in rural areas.

Fragmented middlemen

Every actor — farmer, transporter, cold room, buyer — operates in isolation with no shared platform.

THE SOLUTION

Agrinet: one app connecting every link in the chain.

We're not another marketplace app. Agrinet is a cold-chain-first network — the only platform where farmers, cold room operators, veterinary services, cooperatives, and buyers operate on shared infrastructure.

Cold-chain visibility is the wedge — the piece every other agritech platform skips.

HOW IT WORKS

From farm gate to buyer, in four steps.

1

List

Farmers or cooperatives list available produce or livestock, with quantity and harvest date.

2

Store

Nearby cold room capacity is matched automatically — produce is booked in before it spoils.

3

Verify

Vets confirm livestock health status where relevant; quality is logged before dispatch.

4

Sell

Buyers (retailers, processors, exporters) purchase directly, with delivery fee and commission handled in-app.

PRODUCT

Where we are: MVP in active development.

Farmer & Cooperative Portal

List produce/livestock, track cold room bookings, view buyer offers.

Cold Room Network

Real-time capacity and location matching for storage bookings.

Vet Services

Request and log veterinary check-ins tied to livestock listings.

Buyer Marketplace

Browse verified listings, place orders, arrange delivery.

Status: core app architecture and all four modules are in build. Pilot launch targeted after this competition, starting with cold rooms in one state before expanding regionally.

BUSINESS MODEL

Three revenue lines, one platform.

Subscriptions

Monthly plans for cooperatives, cold room operators, and buyers for platform access, analytics, and priority matching.

Commissions

A percentage fee on each transaction completed between farmers/cooperatives and buyers through the app.

Delivery Fees

Logistics coordination fee for connecting listings to available transport and cold-chain delivery.

MARKET OPPORTUNITY

A ₦3.5 trillion problem, waiting for infrastructure.

TAM

₦3.5tn+

Annual value of post-harvest food loss across Nigeria

SAM

Cold-chain corridors

Perishables markets in states with active cold storage & cooperative infrastructure

SOM

Pilot state network

Initial rollout: one state's cold rooms, cooperatives, and buyer network

WHY AGRINET WINS

Others move produce. We prevent it from spoiling first.

	Typical agritech marketplace	Agrinet
Connects farmers to buyers	Yes	**Yes**
Cold storage network built in	No	**Yes**
Veterinary services included	No	**Yes**
Single app for the full chain	No	**Yes**

GO-TO-MARKET

Start narrow, prove the loop, then expand.

Phase 1 — Pilot

Launch in one state with existing cold room operators and 2–3 farmer cooperatives already producing perishables at scale.

Phase 2 — Prove

Track spoilage reduction and transaction volume to build a defensible case study for cooperatives and buyers elsewhere.

Phase 3 — Expand

Onboard neighboring states' cold rooms and cooperatives, layering in vet partnerships and delivery logistics providers.

THE ASK

₦2.5M to move from MVP to live pilot.

Finish & harden the MVP	**35%**	Complete the four core modules, QA, and security for a public pilot launch.
Cold room & cooperative onboarding	**30%**	Contracts, on-ground onboarding, and training for pilot-state partners.
Vet network setup	**15%**	Recruit and onboard verified veterinary partners for livestock health checks.
Marketing & operations runway	**20%**	Farmer/buyer acquisition and 3–6 months operating costs through pilot.

ROADMAP

The next 12 months.

Now

MVP build across all four modules

Q4 2026

Pilot launch: 1 state, cold rooms + cooperatives live

Q1 2027

First paid subscriptions & commission transactions

Q2–Q3 2027

Vet network live; expansion to 2nd and 3rd state

FOUNDER

Why me.

[Initials]

[Your Name]

Founder, Agrinet

[Add 2–3 lines here: your background — e.g. relevant experience in agriculture, tech, logistics, or the personal reason you're building this. Specific, real detail beats a generic founder bio.]

Currently building solo — this competition's prize would fund the first hires: a field operations lead and a mobile developer.

Nigeria doesn't have a food shortage.
It has a connection shortage.

Agrinet closes that gap — one cold room, one cooperative, one buyer at a time.

Let's talk. | [email/phone placeholder]
